#### ABSTRACT

These reading materials, self-test reviews, and examination for part 1 of a secondary-postsecondary subcourse in club management operations are one of a number of military-developed curriculum packages selected for adaptation to vocational instruction and curriculum development in civilian settings. Five lessons focusing on two topics are included in this part of the subcourse:

(1) portion control in the kitchen and dining room and (2) functions and principles of food cost control. Also included is a panel book of forms and supplementary information. (LRA)

## Military Curricula for Vocational & Technical Education

CLUB RESTAURANT OPERATIONS, PART I 9-9

This military technical training course has been selected and adapted by
The Center for Vocational Education for "Trial Implementation of a Model System
to Provide Military Curriculum Materials for Use in Vocational and Technical
Education," a project sponsored by the Bureau of Occupational and Adult Education,
U.S. Department of Health, Education, and Welfare.

#### MILITARY CURRICULUM MATERIALS

The military-developed curriculum materials in this course package were selected by the National Center for Research in Vocational Education Military Curriculum Project for dissemination to the six regional Curriculum Coordination Centers and other instructional materials agencies. The purpose of disseminating these courses was to make curriculum materials developed by the military more accessible to vocational educators in the civilian setting.

The course materials were acquired, evaluated by project staff and practitioners in the field, and prepared for dissemination. Materials which were specific to the military were deleted, copyrighted materials were either omitted or approval for their use was obtained. These course packages contain curriculum resource materials which can be adapted to support vocational instruction and curriculum development.

### The National Center Mission Statement

The National Center for Research in Vocational Education's mission is to increase the ability of diverse agencies, institutions, and organizations to solve educational problems relating to individual career planning, preparation, and progression. The National Center fulfills its mission by:

- · Generating knowledge through research
- · Developing educational programs and products
- Evaluating individual program needs and outcomes
- Installing educational programs and products
- Operating information systems and services
- Conducting leadership development and training programs

# How Can These Materials Be Obtained?

an activity to increase the accessibility of military-developed curriculum materials to vocational and technical educators.

This project, funded by the U.S. Office of Education, includes the identification and acquisition of curriculum materials in print form from the Coast Guard, Air Force, Army, Marine Corps and Navy.

Access to military curriculum materials is provided through a "Joint Memorandum of Understanding" between the U.S. Office of Education and the Department of Defense.

The acquired materials are reviewed by staff and subject matter specialists, and courses deemed applicable to vocational and technical education are selected for dissemination.

The National Center for Research in Vocational Education is the U.S. Office of Education's designated representative to acquire the materials and conduct the project activities.

#### Project Staff:

Wesley E. Budke, Ph.D., Director National Center Clearinghouse Shirley A. Chase, Ph.D. Project Director One hundred twenty courses on microfiche (thirteen in paper form) and descriptions of each have been provided to the vocational Curriculum Coordination Centers and other instructional materials agencies for dissemination.

Course materials include programmed instruction, curriculum outlines, instructor guides, student workbooks and technical manuals.

The 120 courses represent the following sixteen vocational subject areas:

Agriculture	Food Service
Aviation	Health
Building &	Heating & Air
Construction	Conditioning
Trades	Machine Shop
Clerical	Management &
Occupations	Supervision
Communications	Meteorology &
Drafting	Navigation
Electronics	Photography
Engine Mechanics	Public Service

The number of courses and the subject areas represented will expand as additional materials with application to vocational and technical education are identified and selected for dissemination.

Contact the Curriculum Coordination Center in your region for information on obtaining materials (e.g., availability and cost). They will respond to your request directly or refer you to an instructional materials agency closer to you.

#### Course Description:

This subcourse is of interest to all food service personnel. It is of particular interest to supervisory personnel involved in or anticipating involvement in club restaurant operations. This subcourse will provide the student with a skill in applying food cost controls and procedures for a club restaurant. In addition, the student will be able to train and supervise others in these operations. This subcourse consists of 5 lessons and an examination totaling 9 credit hours of correspondence course study.

- Lesson 1 Portion Control in Kitchen and Dining Room, Part I covers types of menus used in open mess operations, specifies features of the portion control system, identifies reasons for establishing standard portion sizes, and lists control factors in establishing portion sizes.
- Lesson 2 Portion Control in Kitchen and Dining Room, Part II Covers procedures in establishing standard portion sizes, advantages of standard recipes, food production planning, and computations of a recipe.
- Lesson 3 Functions and Principles of Food Cost Control, Part I examines the food cost control system, and the purchasing area such as types of purchasing, main factors to consider when purchasing food, and determining the percentage of yield as it pertains to food prepared for serving.
- Lesson 4 Functions and Principles of Food Cost Control, Part II discusses cost controls in receiving, storing, issuing, producing, inventorying, and selling food items.

#### Lesson 5 - Review

Each volume contains reading material, self-test reviews, and a final examination with no answers included. Also included is a Panel Book of forms and supplementary information. All panels are numbered and will be referred to by number as necessary. This course is designed for student self-study and includes basic as well as supervisory materials.

#### **IMPORTANT!**

Each programed text (PT), in conjunction with appropriate supplementary materials, contains all information required to complete two lessons. Complete the lessons for this subcourse in the sequence shown above.

<sup>\*</sup> General title for all programed texts (PT's) is Open Mess Food Cost Control. The panel book, 161 PB, should be used in conjunction with the PT's.

#### CLUB RESTAURANT OPERATIONS, PART I

#### SECTION I

#### INTRODUCTION

- 1. SCOPE. This subcourse covers types of menus, portion control, and the food cost control system for club restaurant operations. Included are procedures for establishing standard portion sizes, purpose and advantages of standard recipes, recipe food cost card computations, determination of portion selling price and percentage of yield, and cost controls in purchasing, receiving, storing, issuing, producing, inventorying, and selling food items.
- 2. APPLICABILITY. This subcourse is of interest to all food service personnel. It is of particular interest to supervisory personnel involved in or anticipating involvement in club restaurant operations. Successfully completed in conjunction with subcourse QM 372, Club Restaurant Operations, Part II, this subcourse will provide the student with a skill in applying food cost controls and procedures for a club restaurant. With this skill, the student will be able to perform the diverse club restaurant operations covered in this subcourse and in subcourse QM 372. In addition, he will be able to train and supervise others in these operations.
- 3. COMPOSITION. This subcourse consists of 5 lessons and an examination totaling 9 credit hours of correspondence course study. (See subcourse contents on page following section 11:)
- 4. FURTHER STUDY. Upon successful completion of this subcourse, it is recommended that the student immediately apply to take QM 372, Club Restaurant Operations, Part II.

()

#### SECTION II

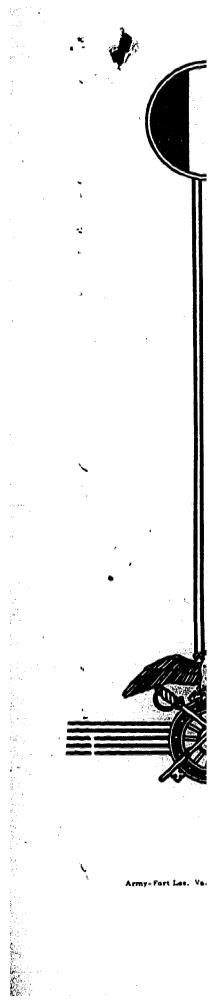

#### **ADMINISTRATIVE INSTRUCTIONS**

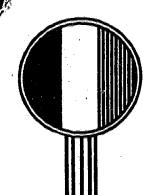

- 5. MATERIALS CHECK. The student should check carefully to make sure that the subcourse packet includes materials listed on the cover of this instruction booklet, to insure that all pages in texts are readable and that texts are complete, and to insure that the subcourse number on the examination answer form corresponds with the number of this subcourse. Any discrepancy should be noted on a Student Inquiry Sheet (QMFL Form 101) and mailed to the Quartermaster School. The student should make certain that his social security account number, mailing address, and ZIP code number are entered on the address side of the form.
  - 6. SUBCOURSE ORGANIZATION. This subcourse uses the following materials:
- a. LESSON TEXTS. The lessons are organized using programed instruction materials. These are self-teaching media which provide the student with the opportunity for immediate learning. Each lesson uses a programed text (PT). Because each PT uses a question-and-answer technique, no lesson exercises are provided. Thus, the student will not be given lesson answer forms to be returned for grading.
- b. EXAMINATION BOOKLET. Unlike other subcourses, the examination is included in the subcourse packet. The examination booklet should not be opened until all the lessons have been studied.
- 7. SUBCOURSE CREDIT. Upon successful completion of the examination, the student receives credit for the total hours of the subcourse.
- 8. EXAMINATION ANSWER FORM. Quartermaster School students must use the machine-process answer form included in the subcourse packet. The examination will be machine graded; thus, the answer form cannot be bent or mutilated. (See NIPUB 202, Administrative Notice to Correspondence Course Students, for further instructions on the use of the machine process answer form.) Students of other schools should use answer forms provided by their schools.
- 9. RECOMMENDED STUDY PROCEDURE. To derive the greatest benefit from this subcourse, it is recommended that the student adopt the following study procedure:
  - a. Set aside certain periods for studying, and follow a planned schedule.
- b. Read carefully the instructions in the programed text for lesson 1. These instructions apply to all the programed texts in this subcourse.
- c. For each lesson, study the objectives in the programed text before starting to work the program. This will assure a firm understanding of what you should be able to do as a result of successful completion of the program.

- d. Starting on the first page of each program, complete the program by reading each frame in turn and, if indicated, by answering questions. All answers to questions are based on knowledge you have gained from previous frames. If you have any queries regarding the subject matter, use the Student Inquiry Sheet (QMFL Form 101) for the lesson on which you are working.
- e. After you have studied all lessons and feel that you have sufficient knowledge of the subject matter, open the examination booklet. Read all directions first, then study and complete the examination exercises. Bear in mind that your answers must be based on the study assignments, not on your personal experience or on information from other sources.
- f. Double check the answer to each examination exercise before indicating your final answer on the answer form. Return the examination answer form to the Quartermaster School.

#### INTRODUCTION TO PROGRAMED INSTRUCTION

In the past, psychologists, educators, and most other people have accepted the concept that people learn through trial and error. This concept is no longer universally accepted. In fact, many psychologists and educators now believe that students learn better when a minimum amount of error is allowed. Programed instruction is designed to reduce the student's errors by presenting the material in small steps and requiring the student to become involved in what he is learning.

Programed instruction is based on sound learning principles. First, the student must actively participate in the program. Since he must respond to each step of the program, he is learning by doing. In an ordinary classroom situation, where few responses are required, it is easy for the student's mind to wander. Programed instruction, however, demands his attention.

Second, the student can move at his own pace. Since each student is provided with a program, there is no need for everyone to work at the same pace. The faster students can move ahead rapidly without being held back by the slower students. The slower students can take the time they need to learn the subject. There is no embarrassment in either case.

Each student is simply learning at his own pace.

Third, the student receives immediate feedback. As soon as a student makes a response, he is told the correct answer. Since the response is usually correct, the student soon gains confidence in himself. Such immediate and frequent feedback is not possible with other methods of instruction.

The program on open mess food cost control is written for open mess stewards, open mess officers, and open mess food advisers who must manage the food cost control procedures in the open mess. They must be able to go into any open mess and detect any errors in the food cost control forms and procedures. They must be able to recognize deficiencies and instruct open mess personnel on corrective measures and correct procedures.

They must also be able to organize their own open mess team and set up correct food cost control practices. The definitions, forms, and accounting procedures necessary to a complete understanding of open mess food cost control are presented.

The programed texts that make up this course are in four volumes, entitled Sequences A through D. There is an accompanying panel book of forms and supplementary information. All panels are numbered and will be referred to by number as necessary.

The student should start at the beginning of the course, Sequence A, and progress until he has completed all four sequences, or volumes. A criterion test (examination) will be given to the student upon completion of the course to test his attainment of the course objectives.

()

#### OPEN MESS FOOD COST CONTROL

#### INTRODUCTION TO SEQUENCE A

#### Portion Control in Kitchen and Dining Room

This programed text explains in detail portion control in kitchen and dining room. We are going to give you information in small segments and ask you to participate at every point during the program by answering questions, filling in blanks, or making a selection from one of several answers. By taking an active part, we believe that you will find the material more interesting and will remember it better. This book is not a graded examination. It is designed to help you to learn.

There is no hidden "gimmick" in this program. We will tell you at the beginning of each sequence exactly what you are expected to learn from that sequence. We will provide a self-test review at the end of each sequence. The final examination questions will be based on the objectives that precede each sequence. Before the final examination, study the objectives and the review section of each sequence. This first volume contains Sequence A.

Please do not try to read this program as you would an ordinary book.

Its sequences correspond to a chapter or lesson in an ordinary book.

Each sequence is made up of frames, or boxes, two to a page, that contain an element of information we want you to learn. Frames are numbered consecutively within each sequence. For example, all frame numbers in Sequence A are preceded by an A.

To read each sequence properly, you must follow the frame numbers and read the frames at the top of each page first until you reach the last

page, then return to the beginning of the sequence and read the frames at the bottom of each page until you complete the sequence. For those frames in which we ask you to fill in a blank or answer a question, the answer will be found at the top of the next frame following it. Please go ahead now with Sequence A.

#### OPEN MESS FOOD COST CONTROL

#### SEQUENCE A OBJECTIVES

#### Portion Control in Kitchen and Dining Room

After completing this sequence of instruction, you will be able to do the following things:

- 1. Distinguish among the three types of menus used in open mess operations.
  - 2. Specify features of the portion control system as follows:
    - a. Define the term "portion control."
- b. Select from a list the three control factors in establishing portion sizes.
- c. Identify six of the eight reasons for establishing standard portion sizes.
- d. Recognize two of the three procedures followed in establishing standard portion sizes.
  - e. Select three of the five advantages of standard recipes.
  - f. Define the term food production planning.
  - g. Identify two of the three tools of food production planning.
- h. Complete computations on a recipe <u>food cost card</u> and <u>a single</u> item food cost card.

Al. Our first objective states that we will be able to distinguish between the three types of menus used in open mess operations. Do you already know what they are? If so, good. If not, you'll learn this as we progress. The first type is the a la carte menu, wherein all courses and accompaniments are priced and charged for separately. The customer pays the total of all items ordered. The portions are larger in this type of menu, and they cost the customer more. The open mess has the advantage of the larger check and better portion and food cost controls. The customer has the disadvantage of paying more for his meal, which causes customer dissatisfaction.

Please go on to frame A2, next page.

They simplify the job of training a new worker

A44. The <u>fifth</u> advantage of using standard recipes is that they aid in controlling food cost. They provide a means of figuring accurately the cost of the ingredients used in racipes, estimating the yield of recipes, checking losses of food items and making the necessary adjustments to prevent loss by using fewer or less expensive recipe ingredients, maintaining quality of food, and keeping leftovers to a minimum. Standard recipes are perhaps the most important factor in controlling food cost in the open mess.

maller in this type of menu?		<u> </u>	Do	they	cost the

arger or smaller in this type of menu?		<del></del> -		<u> </u>	
,					
		ī			
				•	
			<del>, -</del>	••••	: <u>-</u>

a la carte larger more larger

A3. The second type of menu used in the open mess is the <u>table d'hote</u> (pronounced "tobble dote"). This is an entire meal with <u>prearranged</u> courses (no selection of courses) served at a fixed price, including the appetizer, soup, salad, entree (main meat dish), vegetables, bread, drink, and dessert. Patrons can tell at a glance the cost of the entire meal. It is advantageous to patrons because of the ease of ordering, although there is little or no choice or selection of courses for the patron. The portions are smaller, and the entire check does not have to be added up, as the price includes the complete meal.

They aid in controlling food cost

- A47. You probably listed all or most of the advantages listed below.

  Go back and write in any that you missed, as this will help you to remember.
  - 1. They save time for both the cook and the manager.
  - 2. They eliminate guesswork and control waste.
  - They eliminate variations in quality and quantity of product.
  - 4. They simplify the jcb of training a new worker.
  - 5. They aid in controlling food cost.

table d'hote "tobble dote" smaller no

menu, a good, workable, combination of the a la carte and the table d'hote menus. The price of the entree is the cost of the meal including a choice of selection of courses. For example, steak priced at \$2.75 might include a choice of two vegetables, salad, bread, drink, and dessert. It might also include a choice of appetizers. This type of menu simplifies the making out of checks for the meals and permits the patrons to select from an ample assortment of courses. See panel 1 for a selective menu plan.

planning. This is planning to get the right amount of food prepared on time with the least possible loss. There are three tools used in food production planning, as follows: the forecast, the best principles of cooking, and standard recipes. The first tool, the forecast, is an estimate of the number of meals needed that gives the planner the base figure with which to start. This estimate must be translated into raw food to issue to preparing personnel in the kitchen. (See panel 2.2).

Ab. A combination of	the a la carte and the table d'hote menus 18
known as the	menu. It is similar to the table d'hote
menu in that the price of	is the cost of the
, but it	differs from the table d'hote menu in that there
is a	of courses. This menu simplifies the making
out of	and gives the patrons a wide
of courses.	

A49. Panel 2.2 shows a forecasting sales sheet for a Friday luncheon. It forecasts that 20 orders of French fried shrimp would be sold. Sixteen orders were sold and two orders were eaten by employees; 10 ounces of shrimp were left over. The forecast was fairly accurate, and there was little or no waste of this item. There was no loss or leftovers for roast leg of yeal, because the forecast was 100 percent accurate. The forecast helped to get the right amount of food prepared with the least possible loss.

selective the entree entire meal selection checks selection

	A7. The type of menu in which the price of the meal includes an ap-
	petizer, soup, salad, dessert, beverage, and vegetables on a prearranged
	basis with little or no selection is known as the menu.
	The type of menu in which all courses and accompaniments are priced and
	charged for separately is known as the menu.
	The type of menu offering a complete meal for the price of the entree with
	a selection of the courses is known as the menu. How
	do you pronounce table d'hote? ""
:,	
	A50. Define food production planning:
	What is the first tool of food production planning?
	Define it:
	•

Table d'hote a la carte selective "tobble dote"

A8. Regardless of the type of menu offered, the number of sales of each menu item must be tabulated to reveal customer preference for food items (see panels 2 and 2.1) Instructions for completing the scatter sheet are in USCONARC Pamphlet No. 230-1. We will not discuss them here. Customer preference may vary greatly between dinner and lunch. You must give the customers the food they want when they want it. Do not confuse customers by publishing long, complicated menus.

It is planning to get the right amount of food prepared on time with the least possible loss.

The forecast.

It is an estimate of the number of meals needed.

A51. In the kitchen, preparing personnel must use the best principles of cooking (the second tool of food production planning) as the most efficient way to combat waste and overproduction, such as cooking in small batches and following correct cooking time; having smaller containers of uncooked food ready to cook if necessary; and realizing that running short on certain menu items may be better than having leftovers.

A9. What does <u>portion control</u> mean? It means controlling portion sizes served. You serve a specified size (controlled portion) of food to the customer at a set price that will produce a monetary return high enough to recover the purchase cost of the food and other expenses. Meal prices are based on a definite <u>yield</u> of a food product and portion sizes are derived from that yield. We shall learn later how to figure portion sizes.

A5	52.	The	second	tool	o£	food	production	planning	is	to

use the best principles of cooking.

cooking in small batches, following correct cooking times; having smaller containers of food ready to cook if necessary; running short may be better than having leftovers.

A53. The third tool of food production planning in the open mess is standard recipes. We have discussed the five main advantages of using standard recipes. They are perhaps the most important tool of food production planning, because without them you could not plan food production properly. You must have standard portion sizes, standard yields, and standard ingredients to plan food production; and all of these are shown on the standard recipe.

portions

price

cost

yield

All. The lack of standard portions of food is one of the greatest loss factors in selling food. The size of portion for each food item served depends upon the following three control factors:

- 1. Age, activity, sex, and food preference of group to be fed.
- 2. Type of menu and service offered.
- 3. Profits expected.

		test loss factors in sellir	
<u> </u>		. The size of portion of	each food item served

standard portions

- 1. age, activity, sex, and food preference
- 2. menu and service
- 3. profits

Al3. Care should be taken to prevent plates from looking too standardized Skill, artistry, and variety should be employed. There are eight good reasons for using portion control. The <u>first</u> is that it makes possible the purchasing of the <u>right amount</u> of foods for the groups to be fed and prevents overpurchasing. The <u>second</u> is that it prevents waste of food and the loss of <u>nutritive value</u> in food that must be reworked for use again.

the forecast

the best principles of cooking

standard recipes

A56. Turn to panel 3 now and follow it as we discuss how to fill out the recipe food cost card. This particular card is for the wheat griddle cake recipe of 75 portions. We can see that the ingredients for the recipe cost us \$4.7716 (the combined ingredient cost), and that these ingredients produced 300 cakes (yield), making 75 portions (portions yielded) of four cakes each (portion size). Each portion of 4 cakes cost us \$.064 (portion cost), and we sold each portion of four cakes for \$.16 (portion selling price), realizing a gross profit of 60% above the 40% food cost. We shall define and discuss these two percentages as the course progresses.

control prevents	and the	of f
	eventing loss of its	
<del></del>		
	•	

right amount
overpurchase
waste
reworking
nutritive value

A15. The third reason for using portion control is that it makes possible the use of fresh food daily, because you do not overpurchase or prepare more food than you need. The fourth is that it assures standard yields each time from standard recipes and standard purchase units, thereby preventing overproduction and underproduction of food.

11-1/4 pounds

\$.10

 $$1.1250 (11.25 \times .10 = 1.1250)$ 

A58. The steps in preparation section at the bottom of the form tells us that if four tablespoons of batter are used per cake, the recipe will yield 300 cakes. If 75 portions are to be served from the recipe, how many cakes will be in each portion? \_\_\_\_\_\_. We arrive at this by

	more food than you nee		
	at it assures standard

underproduction

Al7. The <u>fifth</u> reason for using portion control is that it assures ease in preparation of food and <u>speeds up service</u>. When you control your portions you know how much of an item to prepare and how much to serve each patron to come out even. There is no guesswork in serving.

\$.064 (cost of one portion) dividing 75 portions into \$4.7716 (the combined ingredients cost) and rounding off to 3 places beyond the decimal (see panel 9)

A60. The portion selling price (\$.16) was based on the food cost percentage (40%) and the anticipated gross profit percentage (60%). The anticipated gross profit percentage is set by CONARC of the open mess as the amount of profit that must be made over and above the food cost percentage. If the anticipated gross profit percentage is 60%, what will be the food cost percentage? The answer is 40%, because 100% - 60% = 40%. (See panel 6, formula 5). The food cost percentage will be taught in detail as the course progresses.

Ald.	The	fifth	reason	for	using	portion	control	is	that	it	assures
			of :	food	and				*		

A61. When we know the food cost percentage we can determine the portion selling price by a formula or a table. Turn to panel 5. This is a mark-up table showing the portion cost based on the food cost percentage. Read the statement in the lower right-hand corner. It tells us how to use the table. If our food cost percentage is 40% (first column to the left) and our portion cost is \$.06, then our portion selling price will be \$.15. Panel 3 shows the portion selling price to be \$.16, which is slightly higher because of the portion cost being slightly higher than .06 (\$.064). This is done more accurately by the formula of dividing the food cost percentage into the portion cost, to get \$.16 (see panel 6, formula 4). The table is better used when the portion costs are even cents and the food cost percentages are even numbers, and the formula is better used for odd cents and odd numbers.

ease of preparation speeds up service

Al9. The sixth reason for using portion control is that is assures minimum plate waste due to uneven portions. Uneven portions cause more plate waste than anything else because portions are too large in some cases and the patron leaves part of the portions on his plate. This is usually avoided by serving even portions, because the customer eats the entire portion.

	A62.	The	ortion selling price is based on two percentages. What are
they?			
		1.	
		2.	
		3.	ONARC sets the
			You subtract this percentage from 100% to get the
		4.	f your food cost percentage were 36% and your portion cost

5. If your food cost percentage were 41% and your portion cost

were \$.10, what would be your portion selling price?

were \$.09, what would be your portion selling price?

A20. The sixth reason for using portion control is that it assures minimum

. The <u>seventh</u> reason is that attractive and uniform servings provide customer satisfaction. Customers will not be satisfied with uneven portion servings that seem too large in some cases and too small in others. Attractive, uniform servings do much to improve the appearance of the serving plate.

food cost percentage
 anticipated cross profit percent

anticipated gross profit percentage
 anticipated gross profit percentage; food cost percentage

A63. We moved the decimal two places to the right in both the dividend and divisor so that we could divide correctly. Now turn to panel 4. This is a single item food cost card. We see that on 5 October 19 we bought a carton of lettuce for \$2.50 per carton. There were 24 heads of lettuce in each carton. Therefore, each head of lettuce cost us \_\_\_\_\_\_\_\_.

plate waste

A21. The <u>seventh</u> reason for using portion control is that it provides
customer The eighth, and final, reason for using
portion control is that it makes possible an accurate cost control system
so that you will know the expected monetary return for the number of meals
served. So portion control goes hand in hand with cost control. You have
to control the portions to control the cost of food. You must know how many
portions a certain recipe will yield, using standard portion sizes, to
determine the cost of the ingredients used in the recipe, and to set your
price for the portions served. Without standard portions, you could not
know the correct yield of the recipe.

## \$.10 per head

	A64. We arriv	ed at this cost per head by

A66. Turn now to panel 3.1 and complete all computations necessary and fill in all blank blocks in the ingredients and yield sections of the food cost card. Then return to this text and continue with the course.

A24. You may have listed some or all of the following. Go back and write in any that you missed. This will help you to remember.

- 1. Prevents overpurchasing of food.
- 2. Prevents waste of food and loss of nutritive value.
- Makes possible use of fresh food daily.
- 4. Assures standard yields from standard recipes.
- 5. Assures ease in preparation and speeds up service.
- 6. Assures minimum plate waste due to uneven portions.
- 7. Provides customer satisfaction through attractive and uniform servings.
- 8. Provides accurate cost control system with expected monetary return.

A67. How did you get along with the computations? Turn to panel 7 and check your computations. Correct any errors you made in panel 3.1 and then return to this text and continue with the course.

A25. How do we go about establishing standard portion sizes? There are three procedures followed: using standard guides, training workers, and using preportioning tools and equipment. Let's discuss the first procedure: using standard guides. These are charts showing the exact yield for foods, portion tables showing sizes of portions for food served, standard recipes giving exact sizes of portions for food served, count and tabulation studies indicating amount produced and actual number of servings sold, multicounters and other machines to check portions served, and plate checks. We will learn more about these guides as this course progresses.

A68. Now turn to panel 4.1 and complete the computations for the entries for 10 May and 1 August by filling in the portion cost and portion selling price blocks for those entries on the single item food cost card. Then return to this text and continue with the course.

ALU.	MIIGE TO	rue TTTOF	broceaure	noed in	COCOLITORITHE	JLa	HOGEG

				, 				_
,								
				······································				-
								- <i>'</i>

A69. Turn to panel 8 now and compare it with your postings in panel 4.1. Correct any errors you made; then return to this text and continue with the course.

using standard guides charts, portion tables, standard recipes, tabulations

A27. The second procedure followed in establishing standard portion sizes is to train workers in this area. They should be trained in preparation techniques that will insure a standard product and a standard yield. For example, a roast placed in too hot an oven will shrink to two-thirds of its original size (a one-third loss). Workers should be trained to follow standard recipes that produce standard yields using standard portions. Workers should be shown the size of portions to serve and how to obtain them prior to mealtime.

A70. REVIEW. Now let's review what we have learned about portion control in the kitchen and dining room. Complete the following blanks to the best of your ability. Review the text for any material you may be unsure of. Check your answers at the top of the next frame, as usual, and make any corrections necessary. Try to complete as many blanks as you can without aid.

A28. The second procedure for	llowed in establi	shing standa	rd portion

A29. The third procedure followed in establishing standard portion sizes is to use preportioning tools and equipment. Standard-sized pans permit portions to be cut or served uniformly. Examples are standard-sized muffin tins, cake pans, and meat loaf pans. Tools include standard-sized ladles, spoons, dippers, ice cream scoops, and serving tongs of various sizes. Serving equipment includes standard-sized individual casseroles, custard cups, molds, and souffle cups. Other equipment includes scales for weighing portions; slicers for breads, meats, and vegetables; and cutters for butter, cheese, eggs, cakes, and pies. Serving preportioned sugar, crackers, jelly, and condiments will do much to control portions served.

- A33. You may have listed some or all of the following examples. Go back and add any that you missed.
- 1. <u>Using standard guides</u>: Food yield charts; portion tables; standard recipes; count studies; multicounters; and plate checks.
- 2. <u>Training workers</u>: Preparation techniques insuring standard product and yield; following standard recipes that produce standard yields and portions; showing workers size of portions prior to mealtime.
- 3. Using preportioning tools and equipment: Standard-sized pans: muffin tins, cake pans, meat loaf pans; standard-sized tools: ladles, spoons, dippers, ice cream scoops, and serving tongs; standard-sized serving equipment: individual casseroles, custard cups, molds, and souffle cups; scales; slicers for breads, meats, and vegetables; cutters for butter, cheese, eggs, cakes, and pies; preportioned sugar, crackers, jelly, and condiments.

- A76. Check your list with the list below and go back and add any that you missed. This will help you to remember them.
  - 1. Prevents overpurchasing of food.
  - 2. Prevents waste of food and loss of nutritive values.
  - 3. Makes possible use of fresh food daily.
  - 4. Assures standard yields from standard recipes.
  - 5. Assures ease in preparation and speeds up service.
  - 6. Assures minimum plate waste due to uneven portions.
- 7. Provides customer satisfaction through attractive and uniform servings.
- 8. Provides accurate cost control system with expected monetary return.

A34. What do you suppose is the <u>purpose</u> of using standard recipes? It is a must that each food service activity establish standard recipes tailored to fit its operation, because the food service manager cannot do an efficient job with scattered, untested recipes. The purpose, then, of using standard recipes is to guide the food service activity in its food preparation using tested recipes tailored to fit its operation.

A77. What are the three main procedures used in establishing portion sizes:

1.	
2.	
•	

49

- 1. using standard guides
- training workers
- using preportioning tools and equipment
  - A78. See how many examples you can list below under each procedure:
    - 1. Using standard guides:
    - 2. Training workers:
    - 3. Using preportioning tools and equipment:

guide tested recipes

A36. We have discussed using standard guides, such as standard recipes, in establishing standard portion sizes. What are the other advantages of standard recipes in the open mess food operation? Actually, there are five main advantages of using standard recipes in the open mess. The first advantage is that standard recipes save time for both the cook and the manager. If the cook knows exactly how much of an item to prepare for a specified number of patrons and if he knows the exact yield (number of portions produced) by the recipe for each item on the menu, he will save much time in preparation.

A79. You may have listed some or all of the following examples. Go back and add any that you missed.

<sup>1.</sup> Using standard guides: Food yield charts; portion tables; standard recipes; count studies; multicounters; and plate checks.

<sup>2. &</sup>lt;u>Training workers</u>: Preparation techniques insuring standard product and yield; following standard recipes that produce standard yields and portions; showing workers size of portions prior to mealtime.

<sup>3. &</sup>lt;u>Using preportioning tools and equipment</u>: Standard-sized pans; standard-sized tools; standard-sized serving equipment; scales; slicers; cutters; preportioned servings of individual items.

They save time

cook

manager

A38. The second main advantage of using standard recipes in preparing food for the open mess food operation is that they eliminate guesswork and control waste. Just as they save time by telling the cook exactly how much of an item to prepare and how much of each ingredient to use, they eliminate guesswork in estimating how much of an item to prepare or how much of an ingredient to use. Preparing accurate amounts will, of course, control waste, as there will be fewer leftovers.

A41. What is the third advantage of standard recipes?
·
•
1. the forecast 2. the best principles of cooking 3. standard recipes
A84. Now let's try some simple problems based on the recipe food
cost card (panel 3):
1. If a recipe calls for 80 portions of an item and yields
240 units of that item, how many units will be in one portion (portion

and one pound of sugar costs \$.10, how much will the total amount of

sugar used cost?

2. If the recipe calls for 1 3/8 lbs. of granulated sugar

They eliminate variations in quality and quantity.

A42. The <u>fourth</u> advantage of standard recipes is that they <u>simplify</u> the job of training a new worker. Suppose you were training a new worker in how to bake a cake and, although you knew quite well how to do this, you followed no particular recipe. Your quality of finished product and yield would be subject to considerable variation. It would be difficult to train the worker so that he could produce uniform quality and quantity of product when he is on his own.

- 1. ANSWER: 3 units; COMPUTATION: 3
  80)240
- 2. ANSWER: \$.1375 cost; COMPUTATION:  $\frac{11}{8} \times \frac{.10}{1} = \frac{$.1375}{1.1000}$ OR

1 lb. = 16 oz; therefore, 1 3/8 lb. = 16 oz.; 22 oz. x .10 = 2.20  $\div$  16 = .1375 +6 oz. 22 oz.

- A85. 1. If the food cost percentage of the recipe is 50% and the portion cost is \$.100, what is the portion selling price?

  NOW TURN TO PANEL 4.
- 2. If you bought a carton of lettuce for \$3.00 and each carton had 25 heads in it, how much would each head cost?

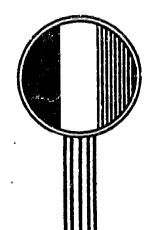

A43. What is the fourth advantage of using standard recipes in the
open mess food operations?
,
•

#### OPEN MESS FOOD COST CONTROL

#### SEQUENCE B OBJECTIVES

### Functions and Principles of Food Cost Control

After completing this sequence of instruction, you will be able to do the following things:

- 1. State the purpose of the food cost control system.
- 2. Select from a list the three essential features of a food cost control system.
- 3. Select five of the seven areas of open mess management in which the food cost control system is applied and identify each area selected as follows:

#### a. Purchasing.

- (1) Recognize the two primary types of purchasing for the open mess.
- (2) Select three of the five main factors to consider when purchasing food.
- (3) Select six of the eight important guides to follow when purchasing food.
- (4) Define the term "percentage of yield" as it portains to food prepared for serving.
- (5) Determine the amount of a food item to purchase based on the percentage of yield of the item.
- b. Receiving. Identify two of the three controls used when receiving purchased food.

#### c. Storing.

- (1) Select four of the six factors contributing to loss of stored food items.
  - (2) State the basic principle of storage.
- d. <u>Issuing</u>. Select two of the four control measures regarding the issue of food items.
- e. <u>Production</u>. Identify two of the three basic production controls governing the preparation of food.

#### f. Inventory.

- (1) State the basic principle relating to inventory control.
- (2) Identify four of the six usual causes of discrepancies in inventories.
- g. Sales. Identify one of the two primary systems used in sales control and identify personnel duties related thereto.

B1. What do you think might be the <u>purpose</u> of a food cost control system? We have already studied (in Sequence A) the <u>portion control</u> system, which is a part of the food cost control system of the open mess. We learned that portion control was a major factor in open mess operations to assure a fair profit to the open mess and a reasonable amount of food at a fair price to the customer. This is the purpose, then, of the food cost control system. It controls the cost of food served to the customer so that he can receive a reasonable amount of food at a fair price and so that the open mess can realize a fair profit.

B51. See if you can list below the six factors contributing to loss of stored food items (in any order):

1.	
2.	•
3.	•
4.	•
5.	•
6.	•

	B2.	State	in	your	OWIL	words	the	barbose	OI	•	TOOG	COBC	COULTOI	By 3 CO.
				<del></del> _										
نسخنب		···												
														٠

- B52. Go back and add any of these that you might have missed:
  - 1. high humidity and temperature.
  - 2. theft.
  - 3. spoilage.
  - 4. shrinkage.
  - 5. waste.
  - 6. rodents and insects.

B3. You probably wrote something like this: It controls the cost of food served to the customer so that he can receive a reasonable amount of food at a fair price and so that the open mess can realize a fair profit.

Go back and add any part of this that you might have left out.

в53.	The	basic	princ	iple of	storag	e is:			•
·					,	which	means	to	 <del></del>
stored st	ock s	o that	you	<del></del>					

- B4. A good food cost control system must have three essential features, as follows:
- 1. It must be practical and not interfere with kitchen working routine.
- 2. It must be controlled by personnel other than food service personnel.
- 3. It must provide enough information so that corrective measures may be taken when necessary.

first in, first out

rotate

use items stored the longest first

- B54. The fourth area of open mess management in which the food cost control system is applied is <u>issuing</u> food in the open mess. There are four control measures to take when issuing food items, as follows:
- 1. Galy persons designated to do so should issue food items. Food should be issued only over an authorized signature, and a record should be kept of every issue.
- 2. Food should be issued only at specified times. It is usually sufficient for the storeroom to make issues in the morning, at noon, and an hour before the storeroom closes.

mess food program, it must not interfere with its efficient operation. It must be workable and must not take too much time away from regular duties of personnel. A good food cost control program, adequately planned and maintained, will add to, rather than take from, the efficient operation of the open mess food program.

B55.	. Who	at are	the	first	two	food	cost	control	measures	to	take	when
issuing	food	items	in	an ope	n me	ss?

<del>,</del>		<del>,</del>			<del></del>	<del></del>	- <del></del>					<del></del>	-
						·							

- 1. Only designated persons should issue food items
- 2. Food should be issued only at specified times
- B56. 3. Food items should be issued only on one specific form. There is no need to have several forms to use when issuing food. One form should be enough. It should have columns for quantity, commodity, stock number, unit price, and total price. It should be numbered in the upper right hand corner to make missing forms easily identifiable. Nothing should leave the storeroom without being shown on a requisition form. The form should be signed by the issuing clerk and by the receiver of the food items.

It must be practical and not interfere with kitchen working routine

B7. Although food service personnel will be involved in the food cost control program, such as in testing recipes for yield, tallying scatter sheets, filling out customers' sales checks, and serving standard portions, the program must be controlled by open mess administrative personnel rather than food service personnel. Since the program involves bookkeeping and accounting principles, the chance for error is greater among personnel not trained in these subjects. Accurate records must be kept of computations and procedures. Pilferage will also be discouraged.

в57.	The	th:	Ĺrd	food	cost	control	measure	to	take	when	issuing	food

use only one specific form to issue food items

B58. 4. The issue form should have a specific distribution of copies. The issue clerk should keep a copy, one copy should be forwarded to the accounting or manager's office, and the receiver of the food should retain one copy. The number of additional copies prepared will depend upon the policy of the particular open mess.

It must be controlled by personnel other than food service personnel

B9. It is one thing to record the number of each food item sold in the open mess, but another thing to record whether you are meeting the anticipated gross profit percentage set by CONARC of the open mess. We have already discussed some of the forms and ways used in the open mess to determine profit for food items sold. The forecasting sales sheet will show the amount of leftovers we have for food items in a specific menu.

	в59.	See	if	you	can	list	below	the	four	control	measures	regarding	5
the	issue	of :	food	l ite	ems:								
		1.					<del> </del>				<del></del>		<b>-</b> •
		2.	<del></del> :					=		<del></del>			-•
		3.				<del> </del>			<del></del>				-*

B10. The recipe food cost card will show us whether we meet the anticipated gross profit percentage for a specific recipe. The single item food cost card will show us how much each portion of an item cost us and how much to charge per portion based on the profit to be expected. All of this information is important in showing us whether corrective measures must be taken. If there is too much waste, too many leftovers, or we do not meet the gross profit percentage set by the open mess directors, then corrective measures must be taken. So the third essential feature of a good food cost control system is that it must provide enough information so that corrective measures may be taken when necessary.

- B60. Go back and add any of these that you missed:
  - 1. Only designated persons should issue food items.
  - 2. Food should be issued only at specified times.
  - 3. Food items should be issued only on one specific form.
  - 4. The issue form should have a specific distribution of copies.

			,	- -•
,	 			-
·				-· -

Bll. See if you can list below the three essential features of a food

B61. Another area of open mess management in which food cost controls are important is the <u>production</u> or preparation of food. Production controls avoid waste, thereby reducing cost and price. There are three basic production controls planned preparation based on past sales history, the use of standard recipes, and the serving of standard portion sizes.

Planned preparation. An analysis of past food sales records is made to assist in planning for food preparation in the open mess (panels 2, 2.1 and 2.2). This avoids overproduction and the preparation of unpopular or unwanted items.

- B12. 1. It must be practical and not interfere with kitchen working routine.
- 2. It must be controlled by personnel other than food service personnel.
- 3. It must provide enough information so that corrective measures may be taken when necessary.

B62. Records of food sales should include the item, day of the week served, the calendar date served, the meal for which it was prepared, the number of portions that were prepared, the number of portions actually sold, and the ratio of portions prepared to portions sold. From this information you will know how much food to prepare.

mess food management: <u>purchasing</u>, <u>receiving</u>, <u>storing</u>, <u>issuing</u>, <u>production</u>, <u>inventory controls</u>, and <u>sales</u>. It stands to reason that wise purchasing is an important part of controlling food cost. Purchasing is of two primary types: <u>direct daily</u> and <u>stockage</u>. The first is done daily for immediate use, such as meat and fresh vegetables, while the second is done periodically for replacement of bulk items. Food cost control is an important part of both types of purchasing.

planned preparation past food sales records

B64. Standard recipes. Recipes and formulas are used that have been tested for acceptance and profit potential. Standard recipes prepared by the chef assure that the food used produces desired portions and that shrinkage and waste are kept to a minimum.

Standard portion sizes. Establishing standard portion sizes is an important production control. This prevents favoritism (the tendency to give larger portions to certain customers), safeguards against customer dissatisfaction, and prevents food waste.

direct daily stockage

- B15. There are five main factors that you must consider when purchasing food for the open mess, as follows:
- 1. The drained weight of the canned goods you are purchasing. An off-brand of peas weighing 14 1/2 ounces may be 90 percent water. Name-brand peas of the same weight may be 10 percent water.
- 2. The grade you are purchasing. Be sure to purchase the grade you require. Buy quality, but buy for specific needs. Choice beef may not be required for braising or stewing, although it may be desired for steaks and roasts.

Bl6. What are the first two main factors to consider when purchasing food for the open mess, in order to control food cost?

l.	
2.	

- 1. Planned preparation
- 2. Standard recipes
- 3. Standard portion sizes

B66. Another area of open mess management in which the food cost control system is applied is in the <u>inventory</u> of food items stocked. The basic principle relating to inventory control in the open mess is that a perpetual inventory be kept on expensive or critical items. To keep a perpetual inventory, the purchases made each day are added to that day's opening inventory and the day's issues are deducted.

- 1. drained weight
- 2. grade you are purchasing
  - B17. Two more purchasing factors to consider are as follows:
- 3. The purpose for which you are purchasing. For example, if you are buying steak for a banquet, you might want to buy 6-ounce steaks. If you are buying steak for dinner meals, you might buy 10-ounce steaks.
- 4. The budget or specification under which you are purchasing.

  Buy just enough so that there will be no spoilage. Use a sales history of the item as a guide (see panels 2, 2.1, and 2.2) when purchasing to estimate the amount needed. Careful budgeting of food purchases helps to keep the food cost to the customer down.

	<b>B67.</b>	The	basic	principle	relating	to inv	entor	contro	ol in	the	open
mess	is th	at a			invent	tory be	kept	on	<del></del>

to that day	y's _						invento	ry	and _	اجاليسيسي		·
the day's												

- 3. The purpose for which you are purchasing
- 4. The budget under which you are purchasing
  - Bl9. The final purchasing factor to consider is:
- 5. The reputation of the brands. Buy by brand name. Buy by grade and quality of product. Buy from known food suppliers.

Now see how many you can list below of the five factors to consider when purchasing food for the open mess:

1.	
2.	
3.	
4.	
5.	

purchases made each day opening

deducting

B69. At the close of each month the closing book inventory is compared with the value of the physical inventory of goods on hand in the kitchen. Discrepancies between the two inventories exceeding five percent of total issues for the month must be investigated. There are six usual causes of these discrepancies between physical and closing book inventories, as follows: illegible requisitions, incorrect pricing, mathematical errors, shrinkage, spoilage, and theft.

B20. You may have listed all of the following. Go back and add any that you missed, as this will help you to remember:

- 1. The drained weight of the canned goods.
- 2. The grade of the product.
- 3. The purpose for which you are purchasing.
- 4. The budget or specification under which you are purchasing.
- 5. The brand reputation.

B70. We can see that with care we can avoid the first three causes of discrepancies. We can make our requisitions clear to read and price correctly on them, avoiding errors in computations. We have discussed how humidity and temperature control and <u>first in-first out</u> help to avoid shrinkage, waste, and spoilage. We have also discussed how theft can be controlled by keeping items subject to easy theft in locked boxes.

- B21. In addition to the five factors to consider when purchasing food for the open mess, there are eight guides that will assist you when purchasing food to control food cost in the open mess:
- 1. Visit the market. This is important because you must see what you are buying in order to know its true value and appearance. Staple items (flour, sugar, canned goods, condiments, etc.) should be purchased from the commissary store.
- 2. Compare prices of different dealers. It is apparent that great savings can be realized if products of comparable quality can be bought for less when buying in larger quantities. Don't count on one dealer for the best buy.

	B71.	List	below	the	six	usual	causes	of	discrepancies	in	inventories,
then	check	your	list	with	the	next	frame.

5.	*	
	· · · · · · · · · · · · · · · · · · ·	

B22. What are the first two guides to controlling food cost when purchasing food for the open mess:

2.

- 1. illegible requisitions
- 2. incorrect pricing
- mathematical errors
- 4. shrinkage
- 5. spoilage
- 6. theft

B72. The last of the seven areas of open mess management in which the food cost control system is applied is sales. There are two primary systems used in sales control, as follows: keeping a history of sales and controlling waiters' checks.

- 1. Visit the market
- Compare prices of different dealers
  - B23. Two other important purchasing guides:
- 3. Compare products for yield. Tests prove that frequently the best grade gives the greatest yield. Large fish have less waste than small fish. One pound of leg of lamb yields only six ounces of edible meat. The edible yield of dressed rooster is 25% to 35% of its original weight.
- 4. Develop good relationships with dealers. This is important because frequently you can be advised regarding economy in purchasing. It is necessary to keep up to date with changing market conditions and new developments that affect prices. The dealer can assist you with this.
- be kept of all menu items sold (panels 2, 2.1, and 2.2). This can be done by one or two persons, depending upon the operation of the particular open mass.
- a. Food checker. The food checker keeps a record of the number of each food item sold, showing individual items when a la carte service is used, and entire menu selections when table d'hote service is used.
- b. <u>Food cashier</u>. The food cashier verifies and records the sales price of each item from the sales check in the cash register and collects the total amount of cash recorded.

B24.	What	are	two	other	importan	t purchasing	guides?		
	3.							<u> </u>

Who are th	e per	sons	tha	t usua	lly do th	is?			
									<b></b> •

- 3. Compare products for yield
- 4. Develop good relationships with dealers
  - B25. The next two purchasing guides are:
- 5. Order early. By planning ahead you can order your subsistence items early enough to receive your preferences rather than having to accept substitutes or less suitable items.
- 6. Buy preportioned, frozen food whenever possible. Preportioned items save on labor (processing), storage space, waste, and portion cost.

  Frozen produce provides seasonal food items throughout the year, and frozen gournet entrees need only to be heated and served.

keeping a sales history food checker and food cashier

- 875. In some open mess operations the duties of the food checker and cashier are combined so that one person performs the functions of both. In any event, the importance of keeping an accurate food sales history cannot be overemphasized.
- 2. Control of guests' checks. Prenumbered guest checks are stored in a locked box and issued to waiters, who sign for them by number. Unused guest checks are returned by the waiter, and used guest checks are turned in by the waiter with the cash to the cashier. Numbers of used checks can be checked against numbers of unused checks.

B26.	What are the next two purchasing guides?											
	5											
	6

cash register

cash

B78. Sales history is transferred to scatter sheets (panels 2 and 2.1) that are used to determine if prices charged are in line with the total daily food cost and to determine if corrective action is necessary in food production planning for the open mess.

B29. Did you get most of them? Here they are. Go back and add any that you missed:

- 1. Visit the market.
- Compare prices of different dealers.
- 3. Compare products for yield.
- 4. Develop good relationships with dealers.
- Order early.
- 6. Buy preportioned, frozen food whenever possible.
- 7. Purchase in bulk when you can to realize a substantial discount.
- Set a schedule for visits by vendors.

B79. REVIEW. Now let's review what we have learned about the functions and principles of food cost control. Complete the following blanks to the best of your ability. Review the text for any material you may be unsure of. Check your answers at the top of the next frame, as usual, and make any corrections necessary. Try to complete as many blanks as you can without aid.

based of the percentage of yield of a food item mean? It is the percentage left to serve after the item is cooked or prepared. For example, an 80% yield of a food item indicates a 20% loss in preparation. Yield is usually determined accurately by a kitchen test of an item. Meat yield can be estimated by referring to meat yield charts published by wholesale meat distributors (panel 10). For example, the chart shows that swiss steak has a yield of 70% of the original item after it is cooked. This information is important in planning the amount of an item to purchase for a given meal.

в80	. т	he	purpose	of	the	food	cost	COI	ntro	l syste	em i	<b>8</b> CO	cont	rol th	1e

B31. The percentage of yield of a food item is the
after it is cooked or prepared. A 90% yield would
indicate a % cooking loss of a food item. Yield is usually
determined accurately by a of an item.
cost food
price profit
• B81. The three essential features of a food cost control system are
as follows:  1. It must be and not interfere with the
working routine.
2. It must be controlled by personnel other than
personnel.
3. It must provide enough information so that
may be taken when necessary.

percentage left to serve 10% kitchen test

B32. To determine the percentage of yield in a kitchen test, the purchased weight of the food item is divided into the weight available for serving.

FORMULA: Weight available for serving = percentage of yield purchased weight

For example, 93.7 pounds of steak are purchased. After trimming and cooking, 75 pounds remain for serving. Divide 93.7 into 75 and you get an 80% yield:

93.2.775.0.0

80 0

20%; COMPUTATION: 100% - 80% = 20%

B34. There is a formula for determining the number of pounds of an item to purchase based on its percentage of yield. Turn to panel 6 and look at formula 1. It says to multiply the number of persons you are going to serve by the desired portion size of the food item. Then multiply the percentage of yield of that item by 16 oz. (one pound). Divide the last figure into the first. This will give you the number of pounds of the food item to purchase.

- 1. direct daily purchasing (for immediate consumption)
- 2. stockage purchasing (for future use)

	B84.	Meat	and	fresh	vegetables	would	be	purch	ased	under	which	type

## B38. Now let's try some simple problems:

	1.	. You	are cond	lucting	a kitche	n test i	for per	entage	of yie	ld of
a foo	d item.	You w	eigh the	item b	efore it	: is prod	cessed a	and cook	ed ard	
find	that it	weighs	98.5 pc	ounds (p	urchased	weight)	). Afte	er it is	cooke	d and
proce	ssed it	weighs	79.6 pc	ounds (w	eight av	vailable	for ser	cving).	What	is
the p	ercentag	ge of y	ield of	the foo	d item?					

## B88. Go back and add any of these that you missed:

- 1. Visit the market.
- 2. Compare products for yield.
- 3. Compare prices of different dealers.
- 4. Develop good relationships with dealers.
- 5. Order early.
- 6. Buy preportioned, frozen food whenever possible.
- 7. Purchase in bulk when you can realize a substantial discount.
- 8. Set a schedule for visits by vendors.

ANSWER: 81% (yield); COMPUTATION: .808 or 81% (rounded oil) 98.5.779.6.0 (panel 9)

B39. 2. A banquet for 300 persons has just been accepted by your club secretary. He goes to you and asks you how many pounds of pot roast he should purchase. You know that the yield for this roast is 62% and that the portion to serve is 4 ounces. How many pounds would you tell him to purchase?

B89. See if you can define the term "percentage of yield" as it

pertains to food prepared for serving:

\_\_\_\_\_\_\_. To determine the percentage of yield in a

kitchen test, the \_\_\_\_\_\_\_ weight of the food item is divided
into the \_\_\_\_\_\_\_.

ANSWER: 121 pounds to purchase

COMPUTATION:

$$\frac{300 \times 4}{.62 \times 16} = \frac{1200}{9.92} = \frac{120.9 \text{ or } 121 \text{ pounds (rounded off)}}{992.120000.0}$$

B40. Now that we have learned how the food cost control system applies to the area of open mess management called <u>purchasing</u>, let's discuss how it applies to the next area, <u>receiving</u>. How do you suppose we can control cost of purchased food by the way we receive it? There are three controls used in receiving purchased food at the open mess, as follows: (1) Orient personnel; (2) check for quantity, quality, and weight; and (3) expedite perishables.

It is the percentage left to serve after the food item is cooked or prepared purchased

weight available for serving

B90. You purchased 98.5 pounds of steak. After trimming and cooking it, you found that you had only 80 pounds left. What was the percentage of yield of the steak? \_\_\_\_\_\_.

chased food which is to <u>orient personnel</u>. The most difficult job in the food field is to convince personnel that food is money. Checking in of purchased food must be done by competent and conscientious personnel. Receiving personnel should be spot checked at their work at irregular intervals. One of the areas most vulnerable to loss in open mess management is the receiving of food. To guard against temptation, receiving personnel should never handle cash. Strict control must be exercised over their proper handling of food to svoid damage and breakage in receipt and storage.

81%; COMPUTATION: .81 98.5.)80.0.0000

B91. You are trying to determine how much of a meat item to purchase for a banquet of 250 persons. The yield of the meat item is 60% and the portion size is 6 ounces. How many pounds will you purchase?

	B42	2.	What	is	the	first	food	cost	cont	rol u	ısed	in	receiving	purchas	ed

#### orient personnel

mess is to check for quantity, quality, and weight. Each purchase must be checked and inspected for quality, quantity, or weight against the invoice which accompanies the order. While the driver is still there, the checker should look for short weight, substandard merchandise, partially-filled cases, and item-for-item adherence to the purchase order and invoice. Whenever possible, order and receive by weight. Items received from commissary sources may have been altered due to supply difficulties. Any differences discovered must be noted on the invoice and purchase order for use by the accounting office in computing inventory data. Stock received must be put on inventory stock cards immediately.

1.	orient	personnel
4	orient	hereomier

- 2. check for quantity, quality, and weight
- 3. expedite perishables

	в93.	The	re are	six	factors	that	contribute	to	loss	of	stored	food	items.

- 1. orient personnel
- 2. check for quality, quantity, and weight
- 3. expedite perishables

B47. The third area of open mess management in which the food cost control system is applied is storing. There are six factors that contribute to loss of stored food items, as follows: high humidity and temperature, theft, spoilage, shrinkage, waste, and rodents and insects. All of these loss factors increase the cost of food to the open mess and thereby raise the menu price of food items.

- 1. planned preparation
- 2. standard recipes
- standard portion sizes

1	B97.	The	basic	princip:	le	relat:	ing	to	inventory	control	is	that	a
<del></del>			ir	ventory	be	kept	on				or		
	·	<del></del> ,	***	_ items.	,								

B48. It is most important to stress to open mess personnel that stored food is the same as money and it must be treated with the same care as money or it will be lost. Proper control of humidity and temperature lengthens the shelf life of stored food, particularly perishable items. It also helps avoid shrinkage and waste for most items. One of the most common causes of spoilage is storage for too long a period of time. This can be avoided by purchasing wisely to avoid overstocking items, and by observing the basic principle of storage: first in, first out, meaning to rotate stored stock so that you use first the items that have been stored for the longest period of time.

perpetual • expensive

critical

B98. The six usual causes of discrepancies between the physical and closing inventories at the end of the month are:

1.	
2.	
3.	
5.	
5.	

B49. What is the first factor that contributes to the loss of
stored food items in the open mess?
This contributes to two other factors. What are they?
What is the basic principle of storage?
Storage for too long a period of time causes
•
l. illegible requisitions
2. incorrect pricing
3. mathematical errors
4. shrinkage
5. spoilage
5. theft
B99. The two primary systems used in sales control are:

high humidity and temperature
shrinkage and waste
first in, first out
spoilage

B50. To avoid theft, food items that are subject to easy theft should be properly safeguarded. Rodent and insect control is important in controlling loss of stored food items in the open mess.

PLEASE RETURN TO PAGE 1 AND CONTINUE WITH FRAME B51.

- 1. keeping a history of sales
- 2. controlling guests' checks

B100. The food checker keeps a	record showing the
of each food item sold, either by	item or entire
selections. The casi	hier verifies the
of each item, records it on the	, and collects

# PANEL BOOK FOR PROGRAMED INSTRUCTION ON

# OPEN MESS FOOD COST CONTROL

SEPTEMBER 1970

This volume supersedes 161 PB, dtd February 1970.

Army-Fort Lee. Va.-8854-70-2M-

#### PLAN FOR A SELECTIVE MENU

Two soups, two fruit cocktails, tomato or mixed vegetable juice.

Entrees to include three meat dishes (one expensive, one medium priced, and one inexpensive), one fish or pountry entree, one meatless plate, and one cold entree.

Two kinds of potatoes and three other vegetables.

Fruit or vegetable salads.

One gelatin, one pudding, one cake, three kinds of ice cream, three kinds of pie or pastry, fruit cup of some kind, fresh fruit or berries in season, or cheese and crackers.

STUDENT NOTE: Complete instructions for completing the scatter sheet can be found in USCONARC Pamphlet No. 230-1.

**▼** SALES PRICE **★** 

Sale Price is found by determining Portion Cost and Food Cost percentage desired. Where these lines cross is the price that must be charged.

#### FORMULAS AND EXAMPLES

1. Number of persons to serve x desired portion size = Number of pounds percentage of yield x 16 oz to purchase

Example: You want to serve 200 persons a 6 oz. portion of steak. You know that steak has an 80% yield. How many pounds would you purchase?

$$\frac{200 \times 6 \text{ oz}}{.80 \times 16 \text{ oz}}$$
. =  $\frac{1200}{12.80}$  =  $\frac{93.7}{1200.00}$  or  $94$ 

2. Price per raw lb x desired portion size = cost per cooked portion percentage of yield x 16 oz. (item with loss factor)

Example: You know that chicken costs you 90¢ a 1b and you want to serve an 8 oz. portion. Chicken has a 60% yield. What is your cost per cooked portion?

$$.90 \times 8 \text{ oz.} = 7.20 = 0.60.$$
  $7.20 = 0.60.$   $9.60.$   $7.20.$ 

3. Price per 1b x portion size = cost per cooked portion (item with no loss factor)

Example: You are paying \$1.20 a lb (16 oz) for boneless cooked turkey roll. You want to serve a 10-oz. portion. What does this portion cost you?

a. 1.20 
$$\frac{x 10}{12.000}$$
 b.  $\frac{16}{12.0000}$ 

4. Cost of item (or menu) = Portion (or menu) selling price.
Food Cost percentage

Example: You know the peas cost you \$.064 a portion. If you are using a 40% food cost percentage, what is your portion selling price?

5. 100 percent - gross profit = food cost percentage.

Example: You are generating a 55 percent gross profit in your kitchen. What is your food cost percentage?

100 - 55 = 45%

6. Cost of item = Food cost percentage Menu selling price

Example: A salad costs you 30¢ and you are selling it for 45¢. What is the food cost percentage for this item?

$$\frac{.30}{.45} = \frac{0.66}{.45}$$

 Opening inventory / issues to kitchen - closing inventory = cost of goods sold

Example: 0100 hours on 2 May, your kitchen inventory reveals \$80 worth of foodstuff. During the day, 2 May, the kitchen is issued \$130 worth of food. At the end of the day your kitchen closing inventory reveals you have \$30 left. What was the cost of goods sold (kitchen) for 2 May?

Opening inventory \$80.00 | 130.00 | S210.00 | Closing Inventory | Total | Tota

8. Cost of goods sold = Food cost percentage for a day or meal Sales receipts

Example: On 2 May your cost of goods sold was \$180. Your sales receipts for the same day were \$400. What was your food cost percentage for 2 May?

 $\frac{180}{400}$ . = .45

1.QH

NO. PLACES TO CARRY BEYOND DECIMAL ITEM 4 rounded off \* Combined Ingredient Cost-----Portion cost----(when costing entire meal) Unit cost----2 Portion selling price-----2 Number of pounds to purchase-----Percentage of yield-----Food cost percentage-----Net and gross profit percentage-----

\*Rule for rounding off: A fraction of a cent less than 5 mills is disregarded, and each fraction of 5 mills or more is computed as a whole cent. For example, \$.156 would be rounded off to \$.16, as the 6 is a fraction of a cent more than 5 mills. \$.154 would be rounded off to \$.15, as the 4 is a fraction of a cent less than 5 mills, and it is disregarded.

All the yields are based on many hundreds of tests and are general averages. They allow for waste in trimming the meat, cooking, shrinkage, and smallend waste. Determination of exact shrink for each meat item which is cooked is advisable.

PANEL II

# MEAT PORTION COST FINDER FOR WHOLESALE CUTS (LOSS FACTOR)

Select the percentage of yield and the desired portion size from the chart below. Multiply the figure that you find by your cost per raw pound and this will give you the cost per cooked portion serving.

**EXAMPLE:** Beef ribs cost 50 cents per pound. We find they have a 40% yield. We want to serve a 6-oz. cooked portion. Therefore, our multiplier is .937.

.937 x .50

.46850 or 47 cents per cooked portion.

#### PERCENTAGE OF YIELD

		TOTAL F	OOD COST		\$1.1820

1.	Portion control meat (no loss factor) costs you \$1.05 per pound. What is the cost of a 6 ounce serving?
2.	When an item costs you 28¢ and you wish to generate a 55% gross profit, what is your selling price (to nearest nickel)?
3.	An item costs you 15¢ and you are working on a 45% food cost percentage. What is your menu selling price (to nearest nickel)?
4.	In your open mess, you expect 150 persons for lunch. You are going to serve a 6 ounce slice of turkey to each person. You know that turkey has a 35% yield. How many pounds of turkey will you purchase?
5.	Veal cutlets cost you \$1.35 per raw pound. You want to serve 6 ounce patties. Veal has a 65% yield. What is the cost per cooked portion?
6.	Your kitchen opening inventory for 2 May was \$60.00. Your issues for the day were \$70.00. Your closing inventory for 2 May was \$20.00. What is your cost of goods sold in the kitchen for 2 May?
7.	An item is selling on your menu for 30¢ and the item costs you 20¢. What is your food cost percentage for this item?
8.	In February your kitchen cost of goods sold and sales receipts are as follows:
	Cost of Goods Sold Sales Receipts (rounded off)
	1 February \$400.00 \$900.00 2 February \$500.00 \$1250.00
	a. What is your food cost percentage for 1 February?
	b. What is the accumulated food cost percentage through 2 February?
9.	You are serving prime ribs of beef to a banquet of 25 persons. Your kitchen tests show these ribs will give you 60% yield and your purchase price for the raw meat is \$0.86 per pound.
	a. Give the number of pounds of prime ribs to purchase, if you are serving a 6 oz. portion?
	b. Give the portion cost of the 6 oz. serving.

Panel 17

- 10. A banquet for 300 persons has just been accepted by your club secretary. He in turn goes to you (a graduate of this course) and asks you how many pounds of pot roast he should purchase. You know the yield test for your specified roast is 62% and the portion served is 4 oz. How many pounds should be purchased?
- 11. After a close analysis of your menu, you have found that an a la carte tossed green salad costs you \$0.43. If your open mess is working on a 51% food cost, what will be the selling price of this salad (to nearest nickel)?
- 12. Your total cost of goods sold (food) is \$78.00. Your food sales for the same period are \$181.00. Determine your food cost percentage.
- 13. You are serving a 7 oz. portion of a wholesale cut of beef; your kitchen tests show a 67% yield and your cost per raw pound is \$0.62.
  - a. Determine the cost of a cooked 7 oz. serving.
  - b. With a 47% food cost percentage what will be your portion selling price?
- 14. You buy a 24 pound turkey at a price of \$0.41 per pound. Your kitchen tests show a yield of 35%.
  - a. What is the cost of a 2 oz. serving?
  - b. What is the cost of a 3 oz. serving?
- 15. A portion controlled meat (no loss factor) costs you \$1.30 per pound. What is the cost of a 5 oz. serving?
- 16. Your issue slips and kitchen inventories have given you the cost of goods sold for the following days:
  - 1 March \$420. 2 March 200. 3 March 400.

Your sales receipts for these respective days are as follows:

- 1 March \$800. 2 March 500. 3 March 680.
- a. What is the daily food cost percentage for each day?

Panel 17-continued

- b. What is the accumulated food cost percentages through the 2nd of March?
  - c. What is the accumulated food cost percentage through the 3rd of March?
- 17. You purchase sirloin steaks (bone in strip) for \$1.26 per pound. What is the cost of a 10 oz. cooked portion when casting the entire meal?
- 18. A portion controlled meat having no loss factor cost you 40¢ per serving portion. You sold it for 60¢ per serving portion. What was your food cost percentage?

#### SOLUTION SHEET

1. Answer: \$.394 Computation:  $1.05 \times 6 = 6.30 = .394$  (formula 3) 16 16 panel 6

2. Answer: \$.60 Computation: 100% - 55% = 45% food cost %; (formula 5) panel 6)

3. Answer: \$.35 Computation:

4. Answer: 161 lb. Computation:  $\frac{150 \times 6}{.35 \times 16} = \frac{900}{5.60} = 160.7$  or 161 (formula 1) panel 6

5. Answer: \$.78 Computation:  $\frac{1.35 \times 6}{.65 \times 16} = \frac{8.10}{10.40} = .779 \text{ or } .78$ computation:  $\frac{1.35 \times 6}{.65 \times 16} = \frac{8.10}{10.40} = .779 \text{ or } .78$ panel 6

6. Answer: \$110. Computation: 60. (formula 7, panel 6.1)
+70.
130.
-20.
110.

8. Answer: 44% Computation: .444 or 44% 900/400.000 360 0 (formula 8) 40 00 panel 6.1 36 00 4 000 3 600

Panel 17.1

b. Answer: 42% Computation:

9. a. Answer: 16 lb. Computation: 
$$25 \times 6 = 150 = 15.6$$
 or 16 lb.  $.60 \times 16 = 9.60$  (formula 1, panel 6)

b. Answer: \$.537 Computation: 
$$.86 \times 6 = 5.16 = .537$$
  
 $.60 \times 16 = 9.60 = .537$   
panel 6)

10. Answer: 121 lb. Computation: 
$$300 \times 4 = 1200 = 120.9$$
 or 121 lb.  $.62 \times 16 = 9.92$  (formula 1, panel 6)

ll. Answer: \$.85 Computation: 
$$.43 = .84$$
 or .85 (formula 4, .51 (to nearest panel 6) nickel)

13. a. Answer: \$.405 Computation: 
$$\frac{.62 \times 7}{.67 \times 16} = \frac{4.34}{10.72} = .405$$
 (formula 2, panel 6)

b. Answer: \$.85 Computation: 
$$.404 = .859$$
 or .85 (to nearest nickel)

14. a. Answer: \$.146 Computation: 
$$\frac{.41 \times 2}{.35 \times 16} = \frac{.82}{5.60} = .15$$
 (formula 2, panel 6)

b. Answer: \$.219 Computation: 
$$\frac{.41 \times 3}{.35 \times 16} = \frac{1.23}{5.60} = .22$$
 (formula 2, panel 6

15. Answer: \$.49 Computation: 
$$\frac{1.30 \times 6}{16} = \frac{7.80}{16} = .49$$
 (formula 3, panel 6)

or panel 13

No. 1 E

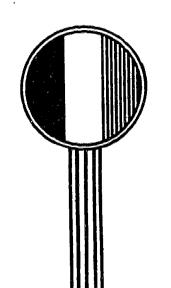

Panel 17.1-continued

a . -47,315

- 16. a. 1 March Answer: 52.5% Computation:  $\frac{420}{800}$ . = .53
  - 2 March Answer: 40.0% Computation:  $\frac{200}{500}$ . = .40
  - 3 March Answer: 59% Computation:  $\frac{1400}{680}$ . = .59
  - b. Answer: .48% Computation:  $\frac{620.}{1300.}$  = .48
  - c. Answer: 52% Computation: 1020. = .52
- 17. Answer: \$.9844 Computation:  $\frac{1.26 \times 10}{.80 \text{ (panel 10)} \times 16} = \frac{12.60}{12.80} = .9844$  (panel 9)
- 18. Answer: 67% Computation: .40 = .666 or .67 (formula 6, .60 panel 6.1)

**EXAM 371-1** 

Credit Hours: 1

### **EXAMINATION ASSIGNMENT**

SUBJECT

Club Restaurant Operations, Part I.

STUDY ASSIGNMENT

Review all programed texts, PT 161, Sequences A

and B.

SCOPE

Types of menus used in open mess operations; definition of portion control, reasons for portion control, and procedures for establishing portion sizes; purpose and advantages of standard recipes; preparation and use of food cost card; determination of portion selling price and percentage of yield for food items; cost controls, including purchasing, receiving, storing, issuing, producing, selling, and

inventoring controls.

**OBJECTIVES** 

To test student attainment of lesson objectives and to emphasize points that have been previously

studied.

2000

#### **EXAMINATION EXERCISES**

REQUIREMENT. Exercises 1 through 3 are matching exercises. Column I is a list of three types of menus used in open mess operations. Column II is a list of menu characteristics. Select the characteristic from column II that matches the menu in column I and indicate your answer on the answer form. The choices in column II may be used once, more than once, or not at all.

Column I

- 1. A la carte menu.
- Table d'hote menu.
- 3. Selective menu.

#### Column II

- a. The price of the meat entree is the cost of the entire meal, with a choice of courses.
- All courses are priced and charged for separately.
- c. The fixed price of the entire meal includes prearranged courses, with no choice of courses.
- d. Some courses are portion controlled and priced high enough to recover the cost of the food less overhead expenses.

REQUIREMENT. Exercises 4 through 33 are multiple choice. Each exercise has only one single-best answer. Indicate your answer on the answer form.

- 4. The size of portion for each food item served depends on
  - a. the number of people to be serviced.
  - b. the nutritive value of the food item.
  - c. the type of menu and service offered.
  - d. the food items on sale at local markets.

- 5. Age, activity, sex, and preference of the group to be fed are control factors for determining
  a. the anticipated profits.
  b. the size of food portions.
  c. the type of menu.
  d. the type of service.
- 6. An accurate cost control system is made possible by using
  - a. fresh food daily.
  - b. prenumbered waiters' checks.
  - c. attractive and nutritive servings.
  - d. portion control.
- 7. Using standard guides, training workers, and using preportioning tools are the procedures you use to
  - a. reduce pilferage losses.
  - b. utilize leftovers from previous meals.
  - c. serve special menus.
  - d. establish standard portion sizes.
- 8. The five advantages of using standard recipes include one advantage that benefits both the manager and the cook. This advantage is
  - a. a provision for variations in quality.
  - b. saved time.
  - c. controlled food costs.
  - d. elimination of waste.

- 9. The most efficient way to fight waste and overproduction is to
  - a. use the best principles of cooking.
  - b. reduce the size of portions.
  - c. prepare only high-yield foods.
  - d. substitute low-cost ingredients whenever possible.

SITUATION. Figure 1 is a partially completed recipe food cost card. Use the information given in figure 1 to complete exercises 10 through 18. Indicate your answers on the answer form.

### RECIPE FOOD COST CARD

RECIPE FOR Baked Macaroni and Cheese

DATE 29 May 19-

· FOR 48 PORTIONS

Ingredients	Quantity	Unit	Unit Cost	Amount

- 18. Your food cost percentage is 33%. What is your portion selling price?
  - a. .220 or .22.
  - b. .227 or .23.
  - c. .247 or .25.
  - d. .445 or .45.
- 19. What is the portion selling price if your food cost percentage is 35% and your portion cost is \$.21?
  - a. \$.47.
  - b. \$.56.
  - c. \$.60.
  - d. \$.63.
- 20. Which system controls the cost of food served to the customer so that he receives a reasonable amount of food at a fair price and so that the open mess can get a fair profit?
  - a. The menu pricing system.
  - b. The portion control system.
  - c. The inventory control system.
  - d. The food cost control system.

- 21. Which of the following is not one of the three essential features of a good food cost control system?
  - a. It must be controlled by personnel other than food service personnel.
  - b. It must provide enough information so that corrective measures may be taken when necessary.
  - c. It must eliminate variations in quality and quantity.
  - d. It must be practical and not interfere with kitchen working routine.
- 22. When purchasing food items, you should always look for
  - a. nonseasonal items.
  - b. the lowest priced items.
  - c. those which meet your specifications.
  - d. storage characteristics of the items.
- 23. You can save on labor, storage space, and waste by purchasing
  - a. substitute food items.
  - b. preportioned, frozen food.
  - c. seasonal fruits and vegetables.
  - d. small rather than large fresh fish.

- 24. Which of the following is-not included in the list of important purchasing guides for assisting you to control food costs?
  - a. Visit the market.
  - b. Develop good relationship with dealers.
  - c. Set a schedule for visits by vendors.
  - d. Delay orders for subsistence items to prevent early receipt from vendors.
- 25. The amount left to serve after a food item is cooked or prepared is known as
  - a. the percentage of loss.
  - b. the portion size.
  - c. the percentage of yield.
  - d. the loss factor.
- 26. As a club manager, you expect 120 people for lunch. You are going to serve a 4-ounce slice of turkey. You know that turkey has a 40% yield. How many pounds do you have to purchase?
  - a. 48.
  - ь. 50.
  - c. 65.
  - d. 75.

- 27. Orientation of personnel and checks for quantity, quality, and weight are two of the food cost controls used when
  - a. issuing purchased food.
  - b. receiving purchased food.
  - storing purchased food.
  - d. inventorying purchased food.
- 28. Increased shelf life as well as decreased shrinkage and waste for most stored food items will result from
  - a. proper control of humidity and temperature.
  - b. rodent and insect control.
  - c. stockage of bulk items only.
  - d. proper identification and security for storage areas.
- 29. Each of the following is a control measure used for the issue of food items EXCEPT
  - a. only designated persons should issue food items.
  - b. food should be issued only at specified times.
  - c. nonperishable food items should be expedited.
  - d. food items should be issued only on one specified form.

- 30. Production controls are important for reducing waste and reducing costs. The three basic food production controls are planned preparation based on sales history,
  - a. The number of portions prepared, and the ratio of portions prepared to portions sold.
  - b. the use of standard recipes, and the use of standard pack food items.
  - c. serving of standard portion sizes, and the use of standard recipes.
  - d. serving of standard portion sizes, and determination of food cost percentages.
- 31. A basic principle of inventory control in the open mess is that a perpetual inventory be kept on
  - a. frozen or fresh meat items.
  - b. canned items.
  - c. expensive or critical items.
  - d. dairy items.
- 32. Illegible requisitioning, shrinkage, spoilage, theft, mathematical errors, and incorrect pricing are the usual causes for
  - a. failure to realize a fair profit.
  - b. discrepancies between physical and closing book inventories.
  - c. purchasing losses.
  - d. failure to meet your established gross profit percentage.
- 33. The two primary systems used in sales control are
  - a. controlling waiters' checks and determining minimum personnel requirements.
  - b. controlling waiters' checks and using preportioning equipment and tools.
  - c. controlling waiters' checks and keeping a sales history.
  - d. controlling waiters' checks and using standard guides.

REQUIREMENT. Exercises 34 through 37 are matching exercises. Column 1 is a list of duties performed by sales personnel. Column 11 lists individuals responsible for performing these duties. Select the person from column 11 that performs the duty listed in column 1, and indicate your answer on the answer form. Choices in column 11 may be used once, more than once, or not at all.

#### Column I

- Keeps a record of the number of each food item sold.
- 35. Records the sales price of each item sold from the sales check.
- 36. Verifies the sales price of each item from the sales check.
- 37. Records the number of entire menu selections sold when table d'hote service is used.

#### Column II

- a. Food checker.
- b. Food cashier.
- . Waiter.

REQUIREMENT. Exercises 38 through 46 are true-false exercises. Indicate your answer on the answer form by using A for TRUE and B for FALSE.

- 38. Portion control means to serve a specified amount of food to the customer at a set price.
- 39. The necessary planning to get the right amount of food prepared on time with the least possible loss is known as food production planning.
- 40. The forecast and inventory control are two of the tools used for food production planning.
- 41. It is better to have leftovers than to take the chance of running short on menu items.

- 42. A recipe food cost card enables you to calculate sales based on a certain number of definite size portions.
- 43. The anticipated gross profit percentage is the amount of profit that must be made over and above the food cost percentage.
- .44. The primary types of food purchases for the open mess are direct daily and stockage.
- 45. The gross weight of canned goods is a main factor to consider when purchasing food,
- 46. The basic principle of storage is to rotate stored stock so that you use first the items stored for the longest period of time. This practice is known as "first in, first out."
